

CONTEXT

Customer : DACO BELLO

Sector of activity :
AGRI-FOOD

Location : St REMY LA VANNE (77)
Year : 2022

Equipment installed :
EKO.E MT-B/ST/HR/EC/II 1402 V

Equipment description :
Propane R290 chiller
Air cooled
*VFD on compressors

Total cooling capacity :
199 KW | +4°C/0°C @+38°C

Total hot capacity :
HR Totale : 330 kW 40°C/45°C

THE CUSTOMER

Founded in 1974, DACO France is a French family business specialising in dried fruit. For 50 years, it has applied its know-how to selecting, importing, processing and packaging the best products from the main production areas.

Every day, the 130 employees at the Ablis plant (78) are committed to guaranteeing quality dried fruit, thanks to rigorous processes and high-performance facilities. One of the key elements in this chain is the refrigeration plant, which ensures optimum preservation of the products by supplying the cold storage rooms.

To ensure reliability and continuity of service, DACO France is installing a CTA propane refrigeration unit to back up its existing NH₃ installation. This optimisation enables DACO BELLO to ensure better temperature control and preserve product quality.
