

CONTEXT

Customer : SALAISONS RÉUNIES

Sector of activity :

AGRI-FOOD

Location : Penta di casinca

Year : 2024

Equipment installed :

EKO MT HE B ST HR 3004S

Description of the equipment :

- *4 completely independent refrigeration circuits
- *4 different semi-hermetic compressors
- *4 brazed plate heat exchangers
- *4 flow controllers

Capacité totale :

393kW | -1°C/-5°C @+35°C

THE CUSTOMER

Installed in Penta di Casinca, near Bastia, this project is part of a sustainable, energy-efficient approach, with the integration of an installation using R290 fluid. Thanks to a CEE subsidy optimised in collaboration with EDF, the project was made easier to carry out, combining performance and sustainability.

The success of the project is based on the association of a local refrigeration specialist and an installer specialising in stainless steel hydraulic circuits for the food industry, guaranteeing optimum implementation. The unit installed supplies cold and hot water to the specific dehumidifiers, dryers and sausage smoking rooms, all of which are essential to the smooth running of the process. This modern installation improves performance while optimising energy and environmental efficiency.
