DA 08 SP Version Inox

**Description of the equipment**  
Special adsorption dryer for the food industry

**Total capacity**  
EAC 710m<sup>3</sup>/h – SAC 570m<sup>3</sup>/h

## THE CUSTOMER

Affrais – Atelier Forézien du Frais – is a company specialized in the processing and preservation of butchered meat. As a key player in the agri-food sector, Affrais supplies the butcheries of Grands Frais stores across the country, relying on a rigorous logistical and industrial organization.

In its modern workshops, compressed air plays a strategic role at multiple levels. It powers maintenance pneumatic tools such as air blow guns and cutting equipment, actively supports packaging and conditioning operations, and facilitates handling operations thanks to pneumatic hoists used for internal load transport.

To ensure impeccable air quality that meets the strict standards of the agri-food industry, Affrais selected the CTA DA 08 SP refrigerated dryer in its stainless steel version, paired with appropriate filtration. This reliable and high-performance technical solution guarantees dry, clean, and consistent air, essential for the proper functioning of all applications.

With this CTA equipment, Affrais strengthens its control over sensitive environments while securing its processes and sustainably enhancing its industrial performance.
