

ADEQUAT^{HEX}

CONTEXT

Customer : ADEQUAT

Sector of activity :
Investment product specialists

Location : Bourg en Bresse 01

Year : 2025

Installed equipment :
MPE-N 040

Description of the equipment :
Thermal mass air dryer

Processing capacity :
300 m³/h

THE CUSTOMER

Adequat, a subsidiary of the Hexalean Group, an emerging leader in metal transformation and processing, continues its ambitious development in France and abroad while strengthening its roots in the Rhône-Alpes region. To support its growth and ensure the reliability of its industrial processes, Adequat required compressed air completely free of water, oil, and particles to supply its lathes and machining centers.

CTA stepped in by providing a MPE-N 040 thermal mass refrigerated air dryer capable of handling 300 m³/h, delivering a solution perfectly suited to the plant's requirements. Thanks to this installation, the compressed air is purified and stable, ensuring equipment protection, uninterrupted production, and optimal quality levels.

CTA's expertise has thus enabled Adequat to enhance its plant's performance while securing its operations demonstrating the added value of reliable, tailor-made industrial solutions in demanding environments.
