

**LOXAM**  
POWER

## CONTEXT

**Customer :** LOXAM

**Sector of activity:** Refrigeration unit hire

**Location :** France

**Year :** 2025

**Installed equipment :**  
IPE NG 351-602

**Description of the equipment :**

\*Rental units on chassis with hydraulic skid and stackable chassis.

\*Custom painting in the requested RAL colour

**Total capacity :**

\*From 20 to 300 kW | 7°C/12°C @35°C

## THE CUSTOMER

As part of an increase in activity and in order to benefit from flexible, high-performance, and rapidly deployable cooling solutions, LOXAM, a major player in the equipment rental sector in France, launched a tender in 2025 for the supply of refrigeration units suitable for multiple and evolving applications.

Following this process, CTA was selected to supply a range of industrial chillers, including a unit from the IPE NG series, meeting the client's high requirements in terms of performance, reliability, and energy efficiency.

Within this framework, an IPE NG 351-602 chiller was installed to cover various operational situations requiring a high degree of operational flexibility. This range operates with the low-GWP refrigerant R454B, in line with the client's environmental commitments. It also integrates a circulation pump equipped with an inverter, enabling precise control and optimization of energy consumption according to actual demand.

The units are further equipped with a No-FROST heat exchanger, allowing rapid commissioning and immediate availability, making them particularly suitable for temporary, occasional, or urgent cooling requirements.
