

## CONTEXT

**Customer :** Olano

**Sector of activity :**

Logistics

**Location :** ARTIX (64170)

**Year :** 2025

**Installed equipment :**

EKO.E MT HE A PP/ST/HR/EC/II  
2804SV

**Description of the equipment :**

\*2 chilled water units

\*Dual pump on the cold primary circuit

\*Dual pump on the hot primary circuit

**Total capacity**

410kW | -2°C/-6°C @35°C

610kW | +30°C/+40°C

## THE CUSTOMER

Groupe Olano is a French company specializing in temperature-controlled transport and logistics. A recognized player in refrigerated transport, it ensures the daily transportation and storage of perishable goods such as frozen products, meat, fresh food, and seafood. The company's headquarters are located in Saint-Jean-de-Luz, in the Pyrénées-Atlantiques region. Founded in 1975, Groupe Olano relies on high-performance and sustainable refrigeration solutions.

Within this framework, CTA implemented a propane (R290) chiller designed to cool loading docks and food storage areas, ensuring cold chain integrity while reducing environmental impact. This natural refrigerant solution meets the requirements for energy performance, reliability, and regulatory compliance, in line with Groupe Olano's commitments.
