

UNE BONNE POMME DE TERRE, ÇA CHANGE tout !

CONTEXT

Customer : Pomliberty

Sector of activity :

Potato production

Location : Ham

Year : 2025

Installed equipment :

EKO.E MT HE A BS/LN/HR/EC/II
3202V

Description of the equipment :

*R290 Propane Refrigeration Unit

*Air Cooling

*Heat Recovery

Total capacity :

657kW | 0°C/-4°C @35°C Heat
recovery : 897kW | 38°C/45°C

THE CUSTOMER

It was in the heart of the Hauts-de-France region, within the Picardy terroir, a historic potato-producing area, that Pomliberty was founded.

With an annual turnover of €25 million, the company markets a wide range of premium potato varieties intended for retail distribution and export markets. Pomliberty growers are fully committed to the initiative "Tous Patatophiles! Soutenez l'esprit filière", ensuring product quality and full traceability.

As part of its development, Pomliberty undertook the construction of a new 4,500 m² facility, designed to support an annual production capacity of 40,000 tonnes. The project also includes the installation of six new cold storage rooms, ensuring optimal storage conditions and perfect preservation of potatoes.

This modernization strengthens the company's logistical efficiency and ability to meet customer demands, while consolidating its position in both the national and international markets.
