

ROBERT-DENOGENT

CONTEXT

Customer : Domaine Robert-Denogent

Sector of activity : Vinicole

Location : France

Year : 2025

Installed equipment :

*HERA 65

Description of the equipment :

*HERA Heat Pump

*Thermoregulation cabinet

Total capacity :

65 kW | 40°C/45°C @ 7°C

THE CUSTOMER

In 2025, Domaine Robert-Denogent called on CTA to optimize the thermal regulation of its wine cellar and the treatment of its wines. To meet the high standards of precision and quality required in winemaking, CTA installed a HERA 65 heat pump with a total capacity of 65 kW, operating with the natural refrigerant R290.

Equipped with a separately mounted hydraulic kit, this solution ensures precise temperature control and enables optimal thermal regulation of all installations, thanks to CTA's Type A thermoregulation technology.

This installation not only protects and preserves wine quality throughout the entire process, but also optimizes the energy efficiency of the cellar, illustrating CTA's commitment to delivering tailored, high-performance solutions designed to meet the specific needs of the wine industry.
